TK-Team brings high-quality environmentally friendly acoustic solutions to the Helsinki Urban Environment Industry Hub

TK-Team manufactures performance wall furniture for professional use. The company's special expertise is project implementations, where reliability, quality and ability meet responsibility. Combining tailored acoustic panels and writing boards for the Helsinki Urban Environment Industry Hub embody these core values of TK-Team.

Demanding performance targets had been set for the interior materials of the Helsinki Urban Environment Industry Hub. 700 fabric-upholstered Hush Acoustic Panels and 40 writing surfaces were produced for the project. The requirement was for class A sound insulation and M1 classified building materials, (which denotes low emissions). It was possible for TK-Team to meet the challenge, as customized acoustic panels are the company's forte.

"Our acoustic panels are prominently displayed in the Helsinki Environment Centre. They diminish echoes and also act as interior design elements. We received the specific sizes, shapes and colours, and set out to fulfil those needs. Our special expertise is reflected in project implementations such as this," **says Kari Harila, CEO of TK-Team.**

Quality and flexibility with extensive experience

TK-Team is an experienced expert in this field. The company has been a pioneer in whiteboards, notice boards and other visual presentation solutions since 1972. Experience, knowledge and the quality of materials are assets that can be seen in our own production plant, project management and professional installation services.

The building of the Helsinki Urban Environment Industry Hub proved to be both a typical and a new type of project for the company.

"The Volumes for acoustic panels were higher than a normal project, and the challenge was compounded by the fact that each panel was produced as a custom-made item. It is precisely this ability that means we stand out from other players in the industry," says Harila.

TK-Team meets the exact requirements of customers demanding flexibility. Competence and understanding are also required during the construction phase, because if there are any last-minute changes, it is essential to remain flexible.

"We implement projects holistically from start to finish. The work includes a room-specific requirement, a site visit, the provision of a sample room, as well as the installation and handover. We deliver on a turnkey basis. When a customer chooses us, they get a project implemented in a reliable and controlled way," says Harila.

Discussion feeds design

TK-Team has been involved in the Helsinki Urban Environment Hub project as a subcontractor to the developer Skanska. TK-Team participated in design meetings with the architect and Skanska. After the construction of the simulation space, the final product range and implementation method were agreed.

Harila says that good dialogue ensures that the customer gets exactly what they want. TK-Team offers consulting to architects and is always happy to listen to their ideas. In-house 3D imaging is also available as a tool for architects.

We always remain open minded: “we listen closely to our customers. For example, we like to hear from teachers, what kind of solutions is needed in schools,” says Harila.

Dependable service for companies, schools and top universities

TK-Team's core values are sustainability, quality and responsibility. Their quality products are robust and timeless in design. TK-Team's values are also expected from their third-party production and logistics companies.

Our products are designed so that their production, storage and delivery are environmentally friendly. In production, we strive to fully utilize all materials. When operating in Europe, we also make our products easily and ecologically accessible to our customers,” says Harila.

TK-Team has had its own factory in Estonia since 1998, and the Estonian sales office exports products to the Baltic countries, Sweden and Russia. One of our key markets is the UK, where the company has had a subsidiary since 2007. There, TK-Team is a prominent player in teaching environments where the company's products are used in many environments, including top universities such as Cambridge and King's College.

“One interesting Finnish domestic project was the Mansikkala wooden life cycle school; “where we delivered Hush Ecophon Acoustic Panels and the “Phenomenon Wall” designed by the architect and TK-Team's product designer. The teaching environment is an area that we know well and where we will continue to operate in the future,” says Harila.

With its mobile product range, TK-Team responds well to changes in the work environment. “When workspaces change, we take that into account in product design. Products need to stay up to date and meet the changing needs of our customers,” Harila continues.
